27. Description of Change: (use additional Sheets as necessary) AutoSys server licenses currently reside on machines which according to the current hardware software mapping, should not be licensed with AutoSys servers. According to the current hardware software mapping AutoSys servers should be licensed on Queuing Servers as primary and PDPS as backup/High Availability. AutoSys licenses are to reside on the following machines: EDF: There are two separate instances running, one on pdps1 and another on pdps2 Mini DAAC: primary(taltos), High Availability (illiad), illiad is to have two instances of AutoSys.					
28. Proposed Solution: (use additional sheets if necessary) Remove all licenses from osprey, g0aih02, et3ws1, hatteras, l0mss01, l0spg05 and dilbert. These licenses should be placed in a pool of available AutoSys licenses.					
29. Alternate Solution: (use additional sheets if necessary)					
30. Consequences if Change(s) are not approved: (use additional sheets if necessary) The licensing scheme for AutoSys will not follow the hardware software mapping, if licenses remain on unauthorized servers.
